

DESIGN RATIONALE

Precision made visible.

The redesign turns Antropi's operational strengths into a clear buying story: choose the precision, see the proof, then start the order. It is aimed at engineering and procurement teams who need confidence in repeatability, quality and delivery - not broad manufacturing claims.

CORE PRODUCT SIGNAL

100 / 10 / 5

MICRON PRECISION TIERS

01 Hierarchy follows the buyer's decision

The opening answers what Antropi offers in one sentence: repeatable precision CNC parts. The next sections progress from 100 / 10 / 5 micron capability to inspection evidence, order visibility, repeat ordering and finally the CAD-upload action.

02 Trust is shown as operational evidence

A live production-record card, an explicitly labelled sample inspection report and a direct job-shop comparison make the promise concrete. Claims remain within the brief: in-house inspection, traceability, clearer delivery expectations and repeat-order continuity.

03 The visual system feels manufactured

Graphite surfaces, square geometry, calibrated grid lines and monospaced labels reference metrology equipment and production records. Antropi violet behaves like an optical scan line: used only to signal precision, progress and action. The machined-metal hero adds material reality without competing with the message.

04 AI reduces technical uncertainty

The CNC part guide explains bearing housings, motor mounts and fluid manifolds in plain English. Gemini runs behind the server boundary; an eight-second timeout and curated knowledge fallback keep the interaction useful when the provider is unavailable. Final manufacturing decisions are explicitly deferred to the engineering drawing.

EXPERIENCE PRINCIPLES

● OUTCOME FIRST

Repeatability leads; autonomous-factory technology supports it.

● SPECIFIC PROOF

Exact tiers and inspection artifacts replace generic quality language.

● ONE PRIMARY ACTION

Every path resolves to uploading the customer's existing package.

● DESKTOP-LED, RESPONSIVE

The 1440 px composition compresses cleanly for tablet and mobile.

● ACCESSIBLE BY DEFAULT

Readable type, keyboard focus, semantic tabs and reduced-motion support.

TOOLS USED

Design & build
React 19 + Vnext / TypeScript / CSS / Lucide

AI & visual
Gemini Interactions API / OpenAI image generation

FUNCTIONAL ARCHITECTURE

React landing page -> API gateway -> component, quote-intake and AI services. Docker Compose runs the independent Node.js services locally; the published demo includes the same Gemini endpoint and fallback at the edge.
